Remark Codes:

- **JC: Joint Construction.** A MILCON project that combines the space and functional requirements of two or more Service Components into one facility, thereby eliminating the need to build separate (or unilateral) facilities.
 - Each component occupies the facility, and has some exclusive use space; however, the facility also has shared or common use areas that effectively reduce the overall required square footage.
 - Cost savings occur due to the design and construction of one facility instead of two.
 - Cost savings also occur in contract administration, supervision, inspection, and overhead.
 - Cost savings continue after construction by eliminating duplication of the following requirements: facility sustainment, antiterrorism/force protection, future restoration and modernization costs.
- **JU: Joint Use (or Joint Use Construction).** Projects that will be used by more than one component during training activities, however will be funded, designed, and constructed by a single component.

- **Blank: Unilateral Construction**

23 Feb 2012
